

# The Lord Leonard and Lady Estelle Wolfson Foundation Wellbeing Lectureship

An update for The Lord Leonard and Lady Estelle Wolfson Foundation

We would like to extend to you our sincerest thanks for your generosity and joining with us to support our life changing research. You will find in this report an update on Dr Dimitrios Charalampopoulos, Lecturer in Wellbeing and Public Health Technologies, a post made possible thanks to your incredible gift.

## Dr Dimitrios Charalampopoulos Lecturer in Public Health

'I am a medically qualified Epidemiologist and Lecturer in Public Health with an interest in applied child health research. Prior to joining the University of Liverpool, I worked as a Senior Research Associate at the University of Bristol MRC Integrative Epidemiology Unit, following one year of research at the University of Bristol Centre for Public Health on the use of systems approach in policy evaluation. Prior to this, I spent five years working as a Research Associate at the UCL Institute of Child Health Children's Policy Research Unit (CPRU) on a Department of Health-funded program, where I managed and analysed large-scale national and international routinely collected clinical datasets (>60K patients) to investigate the role of health services in improving outcomes for children with diabetes in England & Wales and other six high-income countries. Methodological research topics that have featured in my previous research include longitudinal analysis methods using multilevel models to account for complex hierarchical data structures, multiple imputation methods for handling missing data, systems informed mixed methods and meta-analysis of observational studies and randomised trials. I originally qualified in Medicine at the University of Athens and then followed an academic pathway which culminated in my obtaining an MSc in Paediatric Research with distinction and gaining an MRC Scholarship from the University of Cambridge to study for an MPhil in Epidemiology. In 2018, I earned my PhD in Child Health Epidemiology from UCL. I have also practised clinically in both Greece and the NHS.

I started my new post as a Lecturer in Wellbeing and Public Health Technologies in June 2021. My aim is to stimulate new preventive health policy and technology research and also exercise my passion for research-led teaching. I plan to achieve this by leveraging existing platforms of rich, linked, real-time system-wide data (e.g. cipa) feeding the development of the C-GULL birth cohort and the connected mental health programme. It was a true honour to take up this post and I am so thankful to The Lord Leonard and Lady Estelle Wolfson Foundation.

# Our sincerest thanks
